

I support the ARRL proposal to modify operating privileges in the 80, 40, and 15 meter bands.

I also support the ARRL proposal to allow spread spectrum emissions in the 222-225 MHz band, including the proposal that any spread spectrum emissions must not cause harmful interference to stations using other authorized emission and that the spread spectrum stations must accept interference for stations using other authorized emissions.

The proposed 97.119 modification is a welcome one and has been a source of confusion for years. Bravo on this clarification.

I also support the proposed changes for Special Event Call Signs in to address US possessions or territories which have no mailing address.
